

Todd Conner

QA Automation Engineer | Software Development Engineer in Test | Open to Relocation | Remote/Hybrid

Midlothian, VA | tconner2919@outlook.com | 804-503-0022 | github.com/vivaciousdove

SUMMARY

QA Engineer with hands-on experience testing e-commerce applications across APIs, UI workflows, backend integrations, and new feature releases. I bring a systems-engineering mindset from my wireless/RF background, which helps me troubleshoot problems, trace issues across connected systems, and clearly communicate risk. My experience includes manual and automated testing, API and SQL validation, CI/CD release testing, defect management, and working closely with engineering and product teams throughout the development lifecycle.

SOFTWARE QUALITY ENGINEERING & AUTOMATION SKILLS

Testing & Quality Engineering (validate software behavior, uncover defects, assess release risk)

Manual Testing • Functional Testing • Regression Testing • Integration Testing • Exploratory Testing • End-to-End Testing • Test Case & Scenario Design • Browser DevTools • Risk-Based Testing • Release Readiness

Test Automation & Performance (automate repeatable tests and evaluate application performance)

Playwright • JavaScript • Python • Postman • Automated Regression Testing • Data-Driven Testing • Load & Performance Testing • JMeter exposure

API & Backend Testing (validate service behavior, data exchange, integrations, and error handling)

REST API Testing • API Contract Validation • JSON Validation • HTTP Status & Error Handling • Negative & Edge-Case Testing • Log Analysis • Browser Network Inspection

Database Testing (verify backend data accuracy, integrity, and database behavior)

SQL • PostgreSQL • Oracle/MySQL • Data Validation • Record & Transaction Verification • Backend Data Integrity

CI/CD & Cloud (validate builds, troubleshoot pipeline failures, and support reliable releases)

GitHub Actions • CI/CD Test Execution • Release Validation • Pipeline Troubleshooting & Failure Analysis • Git/GitHub • AWS • GCP • Docker • Terraform

QA Management & Collaboration (coordinate testing, defects, requirements, risks, and release communication)

Jira • Zephyr • Confluence • Defect Management • Requirements Review • Agile/Scrum • Test Documentation • Risk & Blocker Communication

SOFTWARE QUALITY ENGINEERING EXPERIENCE

Quality Assurance Software Engineer (Remote) | Diversociete | Atlanta, GA | 05/2025 - Present

E-commerce software company supporting customer and merchant workflows.

- Own end-to-end testing for approximately 12 releases, features, and product changes per month, validating requirements, expected behavior, regression risk, and release readiness.
- Design and execute risk-based manual test scenarios across functional, regression, integration, exploratory, and negative testing to validate expected behavior, uncover defects, and protect critical workflows.
- Validate REST APIs across requests, responses, status codes, business rules, and error handling, using Postman, assertions, logs, and supporting evidence to identify and investigate unexpected behavior.
- Use Playwright, JavaScript, Python, Postman, and AI-assisted development to build and maintain automated tests and troubleshoot application, test, and environment failures.
- Partner with developers and product teams throughout delivery to clarify requirements, investigate defects, validate fixes, and communicate test evidence, blockers, remaining risk, and release readiness.
- Improve testing efficiency and regression coverage by identifying high-value automation candidates, reducing repetitive manual testing, and automating stable, repeatable validations where automation provides clear value.

WIRELESS / RF ENGINEERING EXPERIENCE

RF Engineering / Engineering Management | T-Mobile | Richmond, VA and prior markets

RF systems engineering across network deployment, optimization, mobility, performance validation, troubleshooting, automation, and operational risk.

- Validated RF and network changes against engineering requirements, performance expectations, and KPI targets using drive tests, system data, and traces.
- Evaluated change impact across coverage, capacity, mobility, and customer experience to confirm improvements without introducing performance degradation.
- Investigated network issues using KPIs, RF measurements, system traces, and field results to identify root causes, recommend corrective actions, and verify improvements.
- Used scripts, automated reports, parameter audits, and drive-test processing to reduce repetitive analysis and improve the consistency of network performance reviews.
- Led a team of 10 direct reports and cross-functional partners through network deployments, optimization, and issue resolution, setting priorities and communicating technical risk to stakeholders.
- Prioritized network issues based on customer impact, performance, and operational risk, then communicated findings and recommendations to support deployment and optimization decisions.

EDUCATION & CERTIFICATIONS

Master of Business Administration (MBA) — Western Governors University

Bachelor of Arts, Communications — Baylor University

Certifications: AWS Certified Cloud Practitioner • Project Management Professional (PMP) • Cloud Computing Certificate-University of Phoenix

Professional Development: Ongoing QA, cloud, and software engineering training through bootcamps and university coursework, with hands-on work in testing, programming, automation, APIs, databases, CI/CD, and cloud technologies. (*TripleTen, RTQ, TCB, SQA, #100Devs*)
