

Todd Conner

Senior Quality Engineer | Automation & Cloud | CI/CD | Playwright | Web & API Testing | SQL | JSON | AI-Powered SaaS Builder | PMP | Remote Preferred | Open to Hybrid

Midlothian, VA ✉ tconner2919@outlook.com | <https://github.com/vivaciousdove>

SUMMARY

Senior Quality Assurance Engineer specializing in API-first automation, CI/CD-integrated validation, and cloud-based test execution. Modernizes legacy QA processes into scalable, automated pipelines using Python, Playwright, and GitHub Actions. Known for reducing regression cycles from days to hours and improving release confidence through risk-based, data-driven testing. A collaborative partner who translates requirements into targeted test coverage that improves release confidence.

SOFTWARE QUALITY ENGINEERING & AUTOMATION SKILLS

Automation: Playwright, Selenium, Python API automation, Postman, POM, data-driven testing

Quality Engineering: Risk-based testing, release readiness, shift-left, regression, exploratory

API & Backend: REST, JSON/XML validation, schema validation, SQL, error-path testing

CI/CD & Cloud: GitHub Actions, Jenkins, Docker, AWS, GCP, Terraform

Tools: Jira, Git, Confluence, Zephyr, TestRail, VS Code, PyCharm

PROFESSIONAL EXPERIENCE

Quality Assurance Software Engineer (Remote) | Diversociete | Atlanta, GA | 05/2025 – Present

Diversociete is a boutique e commerce company that designs and operates digital platforms enabling customers to discover curated products, place secure online orders, and receive a seamless shopping experience through integrated web and backend systems.

Tech: Playwright, Python, JavaScript, Postman, REST APIs, JSON, SQL, GitHub Actions, Docker, AWS, GCP, Git, Jira

- Took end-to-end ownership of quality for assigned services, working closely with engineering and product teams from design through production to assess risk, align on test approach, and ensure releases were truly ready to ship.
- Partnered closely with developers and product leaders during refinement, triage, and fix validation, resolving most defects within the same sprint and reducing reopen rates.
- Refactored regression testing to focus on highest-traffic merchant and buyer journeys, shrinking full regression cycles from multiple days to a focused one-day run without increasing post-release defects.
- Built and expanded automated testing using JavaScript, Python, Playwright, and Postman to cover core e-commerce workflows like storefront setup, checkout, payments, and order management, across continuous feature delivery.
- Led API and integration testing across catalog, inventory, pricing, payment, and fulfillment services by validating JSON payloads, business rules, and failure paths, catching defects before they surfaced in the UI or merchant experience.
- Integrated automation directly into CI/CD pipelines with GitHub Actions and cloud runners, cutting release validation from roughly two days of manual effort to same-day approval for standard production releases.
- Applied AI-assisted testing and result analysis to identify high-risk scenarios and recurring failure patterns, uncovering defects earlier and reducing late-stage testing pressure.

Network Engineering/Quality Assurance/Automation | T-Mobile | Richmond, VA | 04/2015 – 04/2024

T-Mobile is a global technology and telecommunications company that designs, builds, and operates large scale web, mobile, and API driven platforms supporting customer applications, backend services, and data systems with a strong focus on performance, reliability, and scalability.

Tech: Python, Postman, MySQL, REST APIs, JSON, Linux/CLI, distributed systems, KPI analysis (RSRP, SINR, throughput), cross-service debugging

- Applied KPI-driven quality analysis to identify systemic issues in distributed network services and to validate the impact of infrastructure changes.
- Supported DevOps workflows by validating environment consistency, ensuring provisioning APIs, backend services, and data pipelines behaved predictably across test, staging, and production environments.

Todd Conner

- Coordinated quality readiness for network and backend deployments, ensuring controlled rollouts, accurate post-deployment validation, and minimal customer impact across large-scale systems.
- Designed SQL-based data integrity checks to validate subscriber records, usage counters, and rating logic across backend data stores, improving reliability of cloud-connected provisioning systems.

EDUCATION

Master of Business Administration, Western Governors University | Richmond VA
Bachelor of Communications, Baylor University | Waco, TX

CERTIFICATION

University of Phoenix Cloud Computing (credential 24NL-43YW-AGRH)
AWS Certified Cloud Practitioner (credential 26b31aa435714ef4b30411f9966d8b10)
Project Management Professional (credential 1440075)
